Part No. 1057-205

Bird Feeding By The Numbers

The spring mechanism is calibrated at the factory to hold 2.5 oz. / 70g. It will close fully at 5.3 oz. / 150g., shutting out the smaller Red Squirrels, as well as the larger Gray Squirrels.

Note: Spring tension may vary depending on outside temperatures.

Birds by Weight

Red-Breasted Nuthatch	0.35 oz. / 10 g.
Chickadee	0.4 oz. / 11 g.
American Goldfinch	0.5 oz. / 14 g.
Common Redpoll	0.5 oz. / 14 g.
Pine Siskin	0.5 oz. / 14 g.
Dark-Eyed Junco	0.7 oz. / 20 g.
Tufted Titmouse	0.7 oz. / 20 g.
White-Breasted Nuthatch	0.7 oz. / 20 g.
House Finch	1.0 oz. / 28 g.
Purple Finch	1.0 oz. / 28 g.
Sparrow	1.0 oz. / 28 g.
Downy Woodpecker	1.5 oz. / 42 g.
Rose-Breasted Grosbeak	1.6 oz. / 45 g.
Yellow-Bellied Sapsucker	1.7 oz. / 50 g.
Red-Winged Blackbird	2.0 oz. / 56 g.
Evening Grosbeak	2.0 oz. / 56 g.
Northern Cardinal	2.0 oz. / 56 g.
Hairy Woodpecker	2.3 oz. / 66 g.
European Starling	3.0 oz. / 84 g.
Jay	4.0 oz. / 112 g.
Common Grackle	4.0 oz. / 112 g.
Mourning Dove	4.0 oz. / 112 g.
Northern Flicker	4.6 oz. / 130 g.
Domestic Pigeon	9.0 oz. / 255 g.

Squirrels by Weight

Douglas Squirrel	5 to 10 oz. / 140 to 280 g.
Red Squirrel	5 to 11 oz. / 140 to 310 g.
Gray Squirrel	12 to 26 oz. / 320 to 740 g.
Fox Squirrel	17 to 37 oz. / 480 to 1050 g.

Wild Bird Safety

The care and safety of wild birds is paramount to Brome Bird Care. In conjunction with the Wild Bird Feeding Industry, we invite you to review the 6-Step Program for creating your very own Wild Bird Sanctuary.

Here are six steps you can take to make the future brighter for birds:

1. Put out the welcome mat!

Habitat loss is the biggest challenge facing birds. You can help by making your neighborhood more attractive to birds by landscaping with native plants that provide natural food sources, shelter from the elements and predators, and nesting sites. Providing feeders, nesting boxes and water also benefits birds. To learn how, stop by your local wild bird shop.

2. Prepare a proper menu.

Providing the appropriate foods year-round will attract more birds to your yard and help ensure that they have a safe and nutritious diet. Refill feeders regularly with food desired by birds in your area. To pick the best menu, stop by your local wild bird shop.

3. Keep feed and feeding areas clean.

To help reduce the possibility of disease transmission in birds, clean feeders and feeding areas at least once a month. Rinse feeders with a solution of white vinegar and warm water. Scrub birdbaths with a brush and replace water every three to five days to discourage mosquito reproduction. Rake up and dispose of seed hulls under feeders. Moving feeders periodically helps prevent the buildup of waste on the ground. Keep seed and foods dry; discard food that smells musty, is wet or looks moldy. Hummingbird feeders should be cleaned every three to five days, or every other day in warm weather. It's good hygiene to wash your hands after filling or cleaning feeders.

4. Birds and chemicals don't mix.

Many pesticides, herbicides and fungicides are toxic to birds; avoid using these near areas where birds feed, bathe or nest. Always follow directions provided by chemical manufacturers. For additional information, visit your garden retailer.

5. Keep cats away from birds.

Scientists estimate that cats probably kill hundreds of millions of birds each year in the U.S. alone. This is a big problem, but it's easy to fix. Many people who enjoy feeding birds also love cats. The best solution is to keep cats indoors. They will lead longer, healthier lives, and your yard will be safe for birds. Install feeders in areas not readily accessible to cats, or install fences or other barriers to help keep stray cats from feeder areas. Collar bells, de-clawing and keeping cats well fed will not solve the problem.

6. Reduce window collisions.

Collisions with glass windows kill millions of wild birds every year. Depending on their size and location, some windows reflect the sky or vegetation, and birds are fooled into thinking they can fly through them. To eliminate this problem, identify windows that cause collisions (typically larger, reflective windows, those near the ground, or those that "look through" the house). Attaching decorative decals or other decorations to the outside surface of the glass can reduce reflections. Feeder birds fleeing predators are vulnerable to window collisions. If this is happening at your house, consider moving feeders within three feet of the windows, so that birds cannot accelerate to injury-level speeds while flying away. Problem windows can be covered with a screen, so that birds bounce off, rather than hit the glass.

The Wild Bird Feeding Industry (WBFI) sponsored development of these guidelines. WBFI is an association dedicated to the progressive expansion of the wild bird feeding industry.

Frequently Asked Questions

What seed should I feed wild birds?

Black Oil Sunflower Seed is a good all-round birdseed. Specialty wild bird stores carry seed blends and information specific to your area. A little guidance from these experts will help you attract more birds. Avoid blends that use fillers such as cracked corn, wheat and millet. These fillers are thrown to the ground by the birds and can attract unwanted species.

When should I feed birds?

Any time of year is a good time to feed the birds! Feeding birds during the fall and winter months helps them survive the cold weather. Nature's natural food supply is actually at its lowest in the spring, also making it an important feeding season. During the summer birds are establishing their territory, nesting and raising their young. This is a time of high activity for birds and a steady supply of dry seed is a welcome addition to their diet.

What happens if I stop feeding the birds?

Mother Nature has always provided for the birds. Birdseed from feeders is a bonus for wild birds and provides only a part of their nutritional needs. If you stop feeding the birds, they will continue roving to feed from natural sources just as they did before you began feeding them.

Do metal perches cause harm?

There is some concern that birds' feet will stick to metal perches in freezing weather. This cannot and does not happen. Birds do not have sweat glands in their feet and never stick to metal objects such as wire fences or radio and television antennas.

What about chipmunks, raccoons, bears and other critters?

Squirrel Buster Standard is absolutely squirrel proof, but is not designed to deter chipmunks, raccoons, bears and other critters that can damage the feeder. Raccoons can damage the feeder when they drop it to the ground and roll it around to extract the seed. This can be minimized by latching your feeder with a snap hook that is secured with a tie wrap.

Birdseed is attractive to a wide variety of wild animals. Usually these animals are nocturnal. If you have a problem, we recommend that you take your feeder in at night.

How long before birds come to a new feeder?

It could take several weeks for birds to feel comfortable around a new feeder. Birds have to find the feeder by sight and then make sure that it is safe. They are constantly aware of the threat of predators and will take the time to check out the surroundings. Placing the new feeder near bushes or trees will give the birds natural hiding places. To keep food clean and fresh, only fill about half full, until the activity on your feeder increases.

Brome Bird Care Legacy Commitment

One of the founding principles of Brome Bird Care is our commitment to reducing the negative impact of human activity on our planet. We achieve that, in large part, by building wild bird feeders that last a very long time, and don't need to be discarded because a single part needs to be replaced. Our commitment is to:

- Build products that will last a long time by using materials that are tailored to their environment and are not easily damaged or worn out.
- Carry spare parts that are readily available to customers. Should a part wear out or break, it can be replaced and the product does not have to be discarded.
- Reduce the impact on our environment by ensuring that our products are 100% recyclable.
- Offer Unlimited Customer Care. Be prepared to be amazed.

Share Your Experiences

Squirrels are incredibly talented and persistent when it comes to food. Please share some of your "squirrelly" experiences with us. We will publish selected stories on our website: bromebirdcare.com

Squirrel Buster®

STANDARD

WILD BIRD FEEDER

Over 1 million Squirrel Busters Sold

Guaranteed Squirrel Proof

Easy to Fill

Easy to Clean

Chew Proof

Weight Adjustable

Seed Saver Technology™

Hassle-Free Warranty

Patented Squirrel-Proof Design

Holds ¾ quart / 1.3 lbs of seed
750 ml / 600 g of seed
Model 1057

Squirrel Buster Standard

The new Squirrel Buster Standard raises the standard in everything a wild bird feeder should be. Here's why:

- Award-winning, patented Squirrel Buster technology is truly squirrel proof. Over 1 million very happy customers have confirmed it.
- Weight adjustable closing mechanism shuts out squirrels as well as some heavier undesirable birds.
- Seed Saver Technology eliminates seed losses to pilfering squirrels. These savings alone pay for the feeder.
- Both perching and clinging footholds increase bird activity.
- Chew-proof components stop annoying squirrel damage.
- Seed Tube Ventilation™ keeps seed fresh.
- Detachable Component System™ for easy cleaning, filling and servicing.
- Dishwasher safe for total sanitizing.
- Stainless steel perches and hanger.
- UV stabilized components.
- Unlimited Customer Care™ at 800-856-5685. Be prepared to be amazed!

How It Works

Openings in the bottom section of the metal mesh shroud align with the seed tray, providing birds access to the food. When a squirrel climbs onto the feeder, its weight automatically forces the metal mesh shroud down, closing access to the seed. Squirrels and some large birds are foiled but not harmed in any way. See videos at bromebirdcare.com

Both Perching and Clinging Birds Love this Feeder

The feeder has perches for perching birds, while the metal mesh shroud offers a large clinging area for clinging birds. Because of the combined perching and clinging surfaces, you will find an enhanced level of bird activity with the Squirrel Buster Standard.

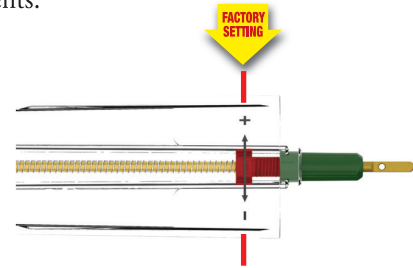

Negative Grip Tube™

The Negative Grip Tube prevents squirrels from grasping the metal hanger with their hind legs, hanging down alongside the feeder and defeating the closing mechanism.

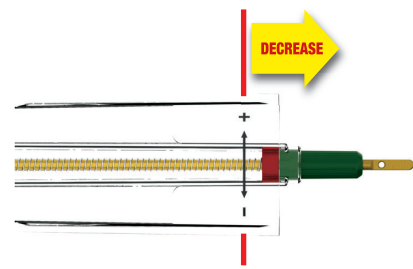

Weight Adjustable for Selective Feeding

The patented adjustable spring mechanism controls how much weight the metal mesh shroud will support, allowing the birds to feed. Any additional weight will activate the closing mechanism. Use the feeder at the factory setting before making any adjustments.

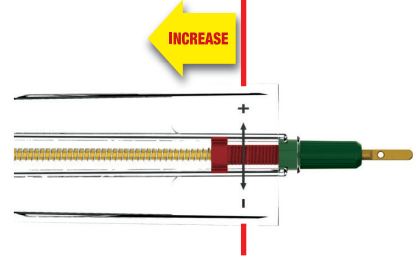

To Decrease Adjustment Setting (-)

Rotate the green dial at the top of the feeder counter clockwise. The red indicator below the dial will move up from the previous setting reducing spring tension. This decreases the weight required to close access to the food.

To Increase Adjustment Setting (+)

Rotate the green dial at the top of the feeder clockwise. The red indicator below the dial will move down from the previous setting increasing the spring tension. This increases the weight required to close access to the food.

Seed Ventilation System™

Transparent seed tubes are like greenhouses – they trap solar energy. Traditional seed tube cover designs block the escape of heated air.

The patented Seed Ventilation System in Squirrel Buster Standard permits humidity and hot air to escape through vents at the top of the feeder. The escaping hot air is replaced with fresh air entering the seed ports and openings on the bottom of the seed tube. The seed remains fresher and attracts more birds.

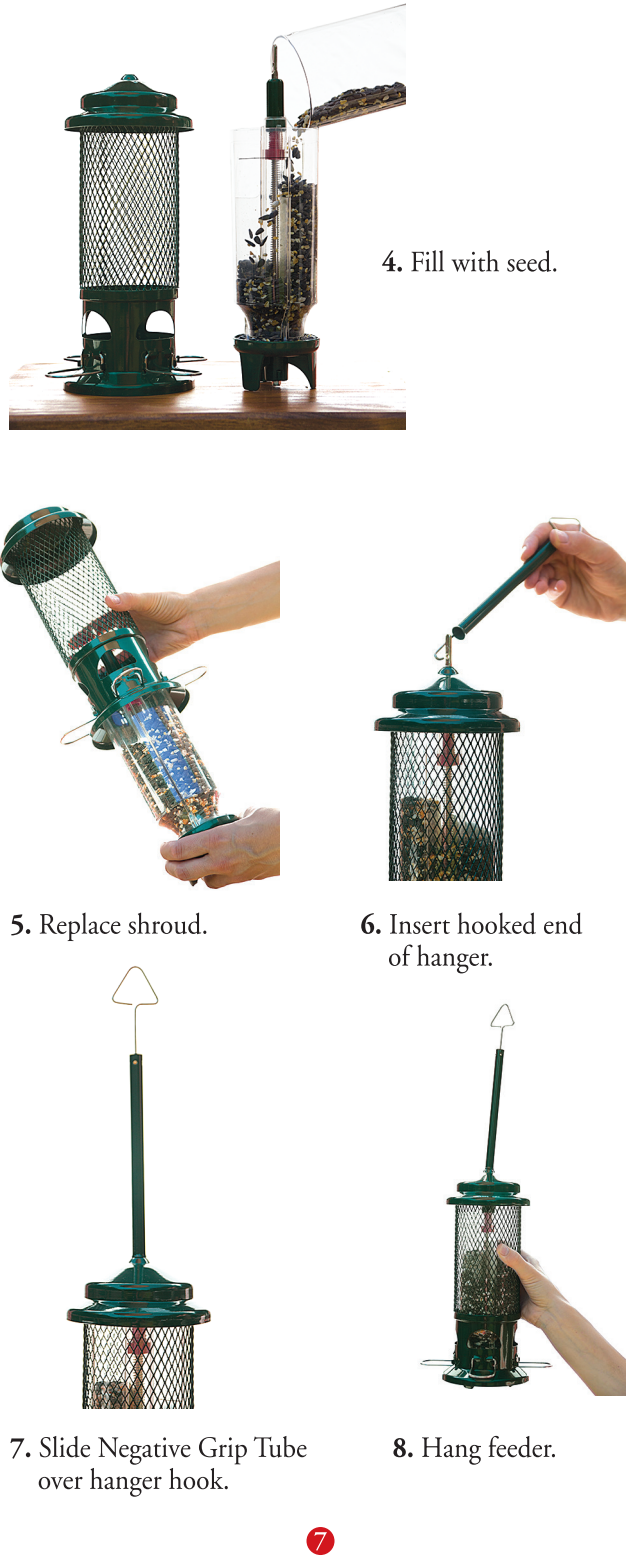

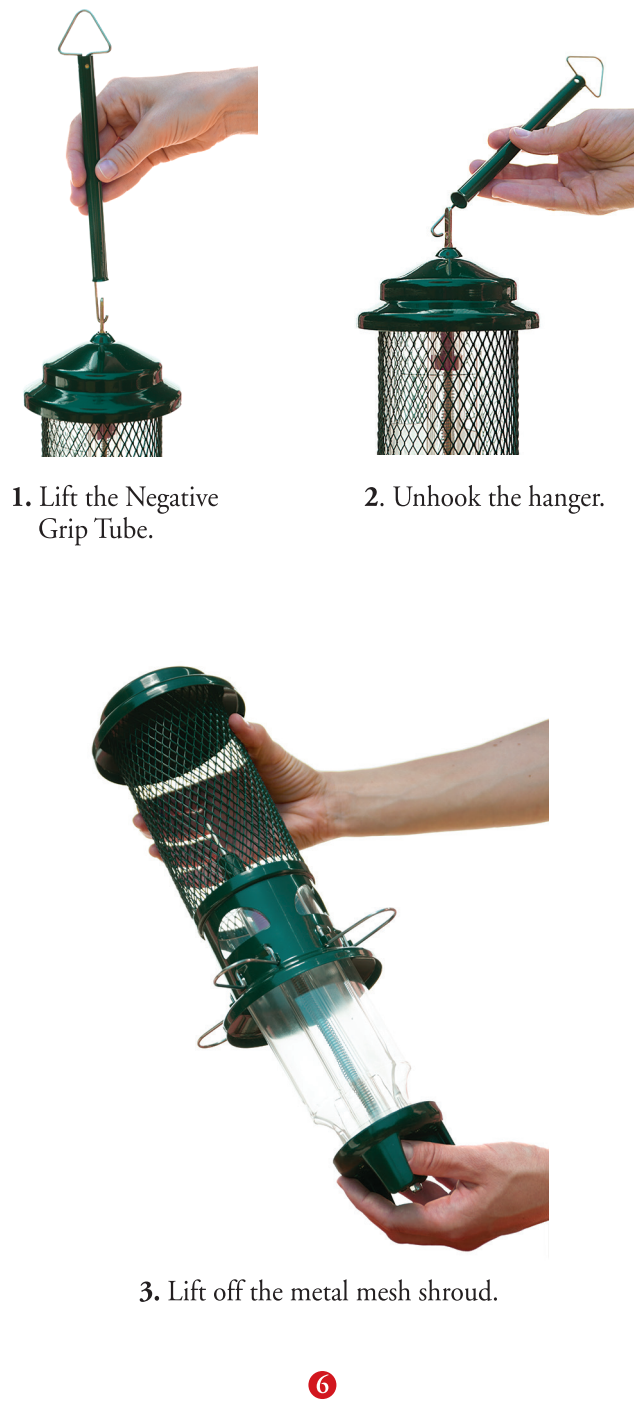

RoxResin™

RoxResin is a remarkable new material that's 100% chew proof, waterproof, rust proof and UV stabilized. Because the color is blended into the material itself, any component made of RoxResin will show little sign of wear and tear, even after prolonged and repeated exposure to the elements or marauding squirrels. It is also 100% dishwasher safe.

Detachable Component System™

Squirrel Buster Standard has been designed to dismantle easily for filling and cleaning.

Freedom to Locate Your Feeder

Since you no longer have to worry about squirrels, you are now free to locate your feeder just about anywhere.

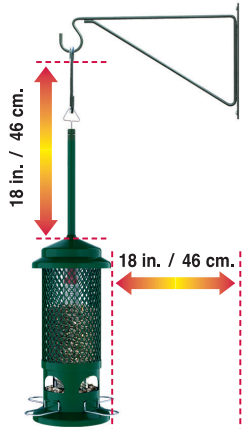

Position your feeder over your favorite window, by your deck or in a nearby tree, for those great close-up views of the birds.

Use wall brackets, deck hangers, branch and extension hooks to hang your feeder.

The Need for Clearance

Remember it is the squirrel's weight that triggers the closing mechanism. If a squirrel can reach over from a nearby foothold and avoid placing its weight on the feeder, it will be able to access the food. Allow for at least 18 in./46 cm. of clearance around the feeder. This will force the squirrel to climb onto the feeder triggering the closing mechanism.

A Clean Feeder Matters

A clean feeder is a healthy feeder. Your Squirrel Buster Standard is designed to be easily dismantled for cleaning. Always examine your feeder before filling to determine if it requires cleaning. Frequency of cleaning varies according to climate. In general, hot and humid climates require more frequent cleaning than colder climates.

Washing by Hand

Remove the metal mesh shroud and discard any accumulation of wild bird food. Wash the metal mesh shroud and seed tube in a solution of dish detergent and warm water. Rinse with a 20% solution of white vinegar and water. Vinegar, a mild, natural disinfectant, will not harm your feeder or the birds. Make sure all components are completely dry before assembling.

Dishwasher Safe for Sanitizing

Remove the metal mesh shroud and discard any accumulation of wild bird food. Place the metal mesh shroud and seed tube assembly on the top rack of the dishwasher. Fill both the pre-wash and the main-wash sections of the detergent dispenser with your regular dishwasher detergent. Select either high temperature drying or an air-dry option. Use your regular washing cycle. Upon completion, your feeder will be sanitized and look like new.

Warning: Bird droppings contain contaminants. Avoid skin contact.
